# Content

EUROPEAN USER  
CONFERENCE  
21-22 MAY 2001

- What's An Undulator ?
- Pictures And Requirements
- Models
- Results
- Summary

With friendly Permission of BESSY II, Berlin

## What's An Undulator ?

- Produces electromagnetic rays from an electron beam
- Electron beam is produced in a synchrotron with 1.7 GeV
- Range: from infrared to x-rays, 'laser like' quality in very short pulses
- Great number of magnets (e.g. 84) in four rows on two beams
- Deflection of electrons by displacement of the magnet rows

# Undulator UE56 (typical)

EUROPEAN USER  
CONFERENCE  
21-22 MAY 2001

# Some Requirements For The Undulator UE46

EUROPEAN USER  
CONFERENCE  
21 - 22 MAY 2001

- Beam y-deflection (vertical): max. 10 micron
- Beam z-deflection (horizontal): max. 40 micron
- Beam tilt in y-direction: max. 80 micron
- Forces: up to 34 kN per magnet row -> great moments
- Length: 3.4 m
- Beam cross section: about 410 mm x 300 mm
- Material: Al
- All bearings free from backlash -> loads only in one direction

# Pro/ENGINEER Model Of UE46

EUROPEAN USER  
CONFERENCE  
21-22 MAY 2001

Supported by  
**PROuser**

# Model And Calculation Characteristics

EUROPEAN USER  
CONFERENCE  
21-22 MAY 2001

- 236 beams and 11,550 volume elements
- Computer: SGI OCTANE, 2x CPU's 300 MHz
- Single pass adaptive solver with 367,614 DOF
- CPU time: 7,193 sec; elapsed time: 8,485 sec
- Memory: 2,196 MB; disk space: 1,521 MB
- Failure against multi pass solver: < 10 % in displacements
- Multi pass solver: 1,906,661 DOF; 4,113 MB memory; 59,821 CPU time

# Displacement Results In All Directions, Front View

EUROPEAN USER  
CONFERENCE  
21-22 MAY 2001

# Model And Calculation Characteristics

EUROPEAN USER  
CONFERENCE  
21 - 22 MAY 2001

- All Requirements were met
- Forces by the lead masses and springs had to be increased to get free from backlash
- Positions of the bearings have been optimized
- Further undulators have been investigated to capture also the influence of the movable magnet rows and more load cases
- Pro/MECHANICA is a precise tool to dimension and optimize such complex equipment before manufacturing
